

Line Switches for AudBase 3.0 Client Upgrade

All available command line switches can be displayed by running the setup executable with `/?`

Use the following command line to install Audbase (Your log location can vary):

```
AudBase Client 300v18p.exe /SP- /VERYSILENT /LOG="C:\WSMGMT\Logs\Audbase  
3.0_vendor.log" /NOCANCEL /NORESTART
```

Uninstallation varies depending on a 32-bit or 64-bit workstation:

32-bit:

```
C:\Program Files\AudBase\AudBase Client\unins000.exe /SILENT
```

64-bit:

```
C:\Program Files (x86)\AudBase\AudBase Client\unins000.exe /SILENT
```

Copy a pre-configured **EnginedServer.4Dlink** file (supplied by AudSoft) to the following location:

32-bit:

```
C:\Program Files\audbase\AudBase Client\Database\
```

64-bit:

```
C:\Program Files (x86)\AudBase\Audbase Client\Database\
```

Wrap in a custom PowerShell script to deploy.
