Effective Masking Levels To Non-Test Ear

Tympanometry

	Right	Left
Probe Tone (Hz)	226	226
Ear Canal Volume	1.30	1.60
Peak Compliance (ml)	0.70	1.40
Peak pressure (daPa)	15	-45
Gradient	0	0

02/06/2005

		Acoustic Reflexes		
Stim	Meas	500	1000	2000
Right	Contra	Abs	95	
	Ipsi	80	CNT	
Left	Contra			
	Ipsi	Abs	UdB	

Abs- Absent CNT- Could Not Test
UdB- Undefined decibel level

Notes

This is a test of the text measurements.
Wound care instructions: 1) Keep steri-strips dry for first 24 hours, then you can let water and soap run over them. Just gently pat them dry afterwards. 2) The steri-strips should stay on for a week. After that you can remove them whenever you want. They will gradually peel off and typically fall off by themselves the second week after surgery. You can just trim the edges as they come up during the first week.
