### Impressions

This is a test of the text measurements, Wound care instructions: 1) Keep steri-strips dry for first 24 hours, then you can let water and soap run over them. Just gently pat them dry afterwards. 2) The steri-strips should stay on for a week. After that you can remove them whenever you want. They will gradually peel off and typically fall off by themselves the second week after surgery. You can just trim the edges as they come up during the first week.
